TRAVEL GROWTH / JOURNEY ATLAS

INTERNATIONAL | TRAVEL MARKETPLACE

FROM PLACE TO BOOKED STAY

Travel Campaign Measurement & Results Atlas

A guest-side campaign blueprint for inspiring a short-stay search in selected destination clusters, then evaluating completed bookings, cancellation-adjusted value and incrementality.

BUSINESS

Airbnb | guest-side travel marketplace campaign

PREPARED BY

ROLE

Digital Marketer | Campaign Analytics & Results

CASE DATE **12 March 2026**

Requested portfolio date label. No real Airbnb campaign was run or measured for this case study.

01 / TRIP INTENT

Create desire, then reduce doubt

TRAVELLER INSIGHT

Travel is a high-consideration decision. Inspiration creates desire, but accurate listing expectations, dates, location fit, cancellation clarity and guest confidence shape the booking action.

01

ESCAPE

Flexible-weekend traveller

Wants a distinctive stay and quick shortlist; dates and total price can shift the decision.

02

GROUP

Friends / family trip planner

Needs enough beds, clear amenities, location context and confidence everyone will fit.

03

LOCAL

Experience-led explorer

Looks for a stay that makes a destination feel accessible and memorable.

CAMPAIGN

A DIFFERENT KIND OF WEEKEND

A proposed creator-led destination collection: neighbourhood, one memorable activity, stay type, realistic travel logistics and clear listing expectations. CTA moves from save/explore to date search and booking; destination availability must be validated before launch.

02 / CREATIVE ROUTE

Three kinds of proof along the trip

1

INSPIRE

24 hours, one neighbourhood

Short itinerary built around a real destination and season; route and timing checked before posting.

2

REDUCE DOUBT

What this stay is actually like

Accurate room, access, amenity and neighbourhood details; show trade-offs rather than over-selling.

3

CONVERT

Your shortlist, dates and total

Retarget consented visitors with destination-specific discovery; avoid false scarcity or unverifiable price claims.

CHANNEL MIX / ALLOCATION

Instagram / Reels	25%		Visual discovery and creator-led neighbourhood itineraries.
YouTube / travel creators	20%		Longer context for location, access and stay fit.
Paid social retargeting	20%		Engaged viewers and visitors; use destination and date signals only where permitted.
Search / intent	25%		Capture explicit destination or stay-type intent.
Testing / incrementality	10%		Geo or audience holdout where practical; deduplicate conversions.

USD 100,000 / 30-day planning scenario - Illustrative media budget only. Actual rates, destinations, booking values and attribution are not provided by Airbnb.

03 / BOOKING FUNNEL

Measure confirmed value after changes

1	Impressions	5,000,000
2	Clicks	50,000
3	Destination visits	35,000
4	Search starts	8,750
5	Booking starts	1,750
6	Bookings	350
7	Cancellation-adjusted value	$225.4k*

MEASUREMENT SAFETY

Deduplicate confirmed booking IDs, incorporate cancellation/alteration adjustments and distinguish Gross Booking Value (GBV) from company revenue or profit. Use a holdout where feasible to estimate incremental demand.

04 / RESULTS DASHBOARD

SIMULATED SCENARIO

Illustrative campaign readout

MEDIA SPEND	PRIMARY RESULT	COST / RESULT
$100k	350 bookings	$286.00

FUNNEL CHECK

Impressions	5,000,000
Clicks	50,000
Destination visits	35,000
Search starts	8,750
Booking starts	1,750
Bookings	350
Cancellation-adjusted value	$225.4k*

EFFICIENCY SIGNALS

CTR	1.00%
Visit rate	70% of clicks
Search start	25% of visits
Booking completion	20% of booking starts
Cost / booking	$286

WHAT THE MODEL SAYS

SYNTHETIC DEMO DATA. Assumes 350 bookings at $700 average gross booking value, then applies an 8% cancellation/alteration reduction for a modelled $225,400 adjusted GBV. GBV is not Airbnb revenue or profit; actual booking mix and cancellation behaviour are unknown.

DASHBOARD READOUT / NORMALISED

CTR 1.00%

Purchase / session 1.00%

05 / DECISION SYSTEM

What to stop, fix, scale and learn

STOP

Optimising on clicks or raw booking-starts when confirmed stays are the business outcome.

FIX

Listing mismatch, missing amenity details, misleading imagery, fee surprises and cancellation data gaps.

SCALE

Destinations and audiences with incremental completed stays and healthy cancellation-adjusted economics.

LEARN

Compare platform attribution with holdout lift, booking window, trip purpose and guest experience signals.

90-DAY EXECUTION

DAYS 1-30

Choose eligible destination groups; verify listing accuracy; map booking and cancellation events.

DAYS 31-60

Test itinerary-led vs stay-fit creative; report confirmed booking and cancellation-adjusted GBV.

DAYS 61-90

Use incrementality tests where feasible; optimise to completed nights/seats and repeat guest cohorts.

RISK REGISTER

- Platform-attributed bookings may include demand that would have booked anyway.
- GBV is not revenue; cancellations, host payouts, fees and incentives alter economics.
- Listing mismatch damages trust and can increase cancellations or support contacts.

06 / FIELD NOTES

Source register & analyst sign-off

PUBLIC REFERENCES
