BASKET TO SECOND ORDER

Campaign, Commerce Analytics & Retention Blueprint

A grocery conversion case study covering first-basket acquisition, cart recovery and a measured path to second order, using Chaldal's public delivery proposition as context.

CASE DATE	11 February 2026
BUSINESS	Chaldal | Bangladesh online grocery
SCOPE	First order → checkout → repeat order
PREPARED BY	SHAKIR HOSSAIN TALHA
ROLE	Digital Marketer | Campaign Analytics

Date is a requested portfolio case label. Results shown later are synthetic worked examples, not Chaldal performance data.

01 / SHOPPING MISSION

Make the next basket obvious

CUSTOMER INSIGHT

Grocery intent is often practical and immediate. A helpful basket solution, credible availability and a low-friction checkout can beat a generic “shop now” message.

01

01 / PLANNER

Weekly household planner

Wants less shopping friction, predictable basics and fewer forgotten items.

02

02 / MOMENT

Dinner / top-up shopper

Has an immediate need; responds to a relevant basket idea and honest delivery information.

03

03 / REPEAT

Recent first-time buyer

Needs a reason to come back: useful reminders, replenishment and saved favourites - not constant couponing.

THE CAMPAIGN RECIPE

WHAT’S MISSING FROM TONIGHT?

A proposed meal-moment campaign: show a realistic dinner plan, the ingredients basket, substitutions where available and the route to order. Follow first order with consent-based replenishment reminders and a 30-day second-order objective.

02 / CONTENT TO CART

Make the basket the hero

01 / BASKET REEL

Dinner in 5 items

A quick basket build with real product pricing captured at publication time; no unverified “lowest price” claims.

02 / CAROUSEL

The forgotten basics list

A saveable pantry checklist that links to a curated list where the experience supports it.

03 / RETENTION

Running low? Refill the essentials

A post-purchase message based on actual basket history and consent; frequency cap to avoid fatigue.

MEDIA MIX

- Meta short video 30%
- Catalog / product ads 25%
- Cart recovery 15%
- Repeat-order CRM 20%
- Experiment reserve 10%

BDT 400,000 / 30-day planning scenario - Scenario budget only. Delivery coverage, fee rules, basket availability and order economics must be validated by city.

03 / EVENT TRACKING

Follow the basket through checkout

EVENT CHECKLIST

- view_item_list / view_item
- add_to_cart + item_id + price
- begin_checkout + basket_value
- purchase + transaction_id + delivery_city
- refund / cancel / substitution
- second_purchase within 30 days

KPI DEFINITIONS

CTR	1.25%	Session rate	80%
Add-to-cart rate	20%	Checkout completion	75%
Cost / order	BDT 238	30-day repeat	24% of first-order cohort*

04 / RESULTS DASHBOARD

SYNTHETIC DEMO DATA

Illustrative campaign readout

MEDIA SPEND	PRIMARY RESULT	COST / RESULT
BDT 400k	1,680 orders	BDT 238

FUNNEL CHECK

Impressions	1,600,000
Clicks	20,000
Sessions	16,000
Add to cart	3,200
Checkout start	2,240
Orders	1,680
30-day repeat	403 buyers*

EFFICIENCY SIGNALS

CTR	1.25%
Session rate	80%
Add-to-cart rate	20%
Checkout completion	75%
Cost / order	BDT 238

WHAT THE MODEL SAYS

SYNTHETIC DEMO DATA. Assumes BDT 1,250 average order value and 24% of first-order buyers repeat within the measurement window. Gross attributed order value is not profit; deduct refunds, discounts, delivery and product costs.

DASHBOARD READOUT / NORMALISED

CTR 1.25%

Purchase / session 10.50%

05 / DECISION SYSTEM

What to stop, fix, scale and learn

A/B TESTS / DIRECTIONAL EXAMPLE ONLY

01

A / Generic convenience

1.1% CTR; 15% add-to-cart per session

Gets attention but may not narrow the shopping job.

02

B / Specific dinner basket

1.4% CTR; 18% add-to-cart per session

Illustrative lift suggests stronger relevance; verify order margin and substitutions.

03

C / Discount-first

1.7% CTR; 11% repeat-rate hypothesis

High click appeal can mask promo-seeking customers; do not scale on CTR alone.

OPTIMISATION ROUTE

STOP	Discounting all users equally or retargeting already-completed orders.
FIX	Price/stock mismatch, delivery promise clarity, payment failures and missing transaction IDs.
SCALE	Basket themes that improve contribution margin and D30 repeat, not only first-order ROAS.
LEARN	Compare repeat by first basket, city, new/returning status and offer exposure.

90-DAY ROADMAP: DAYS 1-30: Validate product feed, order events and cancellations; test two basket concepts and checkout friction. / DAYS 31-60: Launch consented cart recovery; build first-order cohort groups; evaluate promo incrementality. / DAYS 61-90: Optimise to contribution per customer; expand repeat flows based on observed reorder windows.
